Notes	1. All parameters NOT specially mentioned are measured at 120VAC input, rated load and 25°C of ambient temperature 2. To extend the driver's lifespan, reduce the loading at lower input voltage.	

- Connect the black and white input wires to the AC L (live) and N (neutral) respectively, and the green wire to the ground.
- For the output wires, connect the red wire to the positive side (+) of the LED and the black wire to the negative side (-) of the LED.
- It is crucial to ensure these connections are made correctly to prevent malfunction and potential damage to the product.

DERATING CURVE

Make sure to adjust the load based on the load derating curve, which accounts for changes in ambient temperature. This helps prolong the working life of the system.

INSTRUCTION

- This driver should be installed by a qualified professional.
- Ensure that the driver is installed with sufficient ventilation to allow for proper heat dissipation.
- Verify the wiring is correct before testing to prevent damage to the light and power supply.
